Feature Engineering is the art/science of representing data is the best way possible. This is the comprehensive guide for Feature Engineering for myself but I figured that they might be of interest to some of the blog readers too.

### **The Comprehensive Guide for Feature Engineering - A Data**

A software architect discusses the nature of feature engineering, including how it is used to work with when developing machine learning and deep learning.

### **Feature Engineering - DZone Big Data**

Feature engineering and feature extraction are key “ and time-consuming “ parts of the machine learning workflow. They are about transforming training data and augmenting it with additional ...

Feature Selection. Feature selection is a process where you automatically select those features in your data that contribute most to the prediction variable or output in which you are interested.

### **Feature Selection For Machine Learning in Python**

In machine learning and statistics, feature selection, also known as variable selection, attribute selection or variable subset selection, is the process of selecting a subset of relevant features (variables, predictors) for use in model construction.

In engineering, draft is the amount of taper for molded or cast parts perpendicular to the parting line. It can be measured in degrees or mm/mm (in/in).

1. Introduction. A feature is an individual measurable property of the process being observed. Using a set of features, any machine learning algorithm can perform classification.

Moving average smoothing is a naive and effective technique in time series forecasting. It can be used for data preparation, feature engineering, and even directly for making predictions.
