Under review as a conference paper at ICLR 2017 If $P(r(x)) > P(g(x))$, then x is a point with higher probability of coming from the data than being a generated sample.

Compartmental models are a technique used to simplify the mathematical modelling of infectious disease. The population is divided into compartments, with the assumption that every individual in the same compartment has the same characteristics.

This paper presents a contact stress analysis for a pair of mating gears during rotation. Contact stress analyses for spur and helical gears are performed between two gear teeth at different contact positions during rotation.
