set topology, which is concerned with the more analytical and aspects of the theory. Part II is an introduction to algebraic topology, which associates algebraic structures such as groups to topological spaces. We will follow Munkres for the whole course, with some occasional added topics or different perspectives. We will consider topological spaces axiomatically. That is, a topological space ...

General Topology. The goal of this part of the book is to teach the language of mathematics. More specifically, one of its most important components: the language of set-theoretic topology, which treats the basic notions related to continuity. The term general topology means: this is the topology that is needed and used by most mathematicians. A permanent usage in the capacity of a common ...

General Topology

General Topology is based solely on set theory and concerns itself with structures of sets. It is at its core a generalization of the concept of distance, though this will not be immediately apparent for the novice student.
